

RADIO-WAVE SURGERY For 'Scarless' Mole Removal

IDEAL CANDIDATES

Anyone with moles, warts, skin tags or other so called 'lumps and bumps.'

HOW DOES IT WORK

Your mole will be melted away with targeted radiofrequency. This energy seals blood vessels, which basically eliminates the risk of bleeding. Minimal bruising and less discomfort promote the best healing possible with any of today's technologies. Different types of electrodes are used depending on the type of lesion, e.g. fine needle, wire loop, scalpel blade etc.

ALTERNATIVES

Traditional excision, shave removal, cookie cutter (punch) removal, laser treatment, liquid nitrogen freezing

ANESTHESIA

Local anesthesia

WHO?

Dr. Esche

LENGTH OF PROCEDURE

Depends on number and size of lesions

INVASIVENESS

Minimal

RECOVERY TIME

Radio-wave surgery is fast and minimally invasive, with **no downtime or recovery**. Almost everyone returns directly to normal activities.

PREPARATION

None

CONTRAINDICATIONS

Pregnancy, breastfeeding, pacemaker, defibrillator

AFTER CARE INSTRUCTIONS

You will leave our office with a flat wound that typically heals within 1-2 weeks. Some redness is expected to remain for up to 3 months. You can return to work immediately after the procedure and shower the same day. Please wear a band-aid for at least 1 week. The scab will typically fall off after 1-2 weeks. A healing serum, daily sunscreen, and abstaining from picking are essential for best cosmetic results. Follow-up after 6 weeks is recommended.

SIDE EFFECTS

Minor swelling, redness, bruising and tenderness for a few days, increase or decrease of skin color, wound depression, lesion recurrence (1%)

OUTCOMES

No dermatologist can guarantee a 'no scar' result, but radio-wave surgery is the closest we can get to scarless.

MAINTENANCE

Typically not needed.

ADDITIONAL PROCEDURES

Typically not needed

INVESTMENT

Your investment varies depending on individual goals, targeted areas, and number of treatments.
